

Integrated Medical Diagnosis System

Dr. Mohamed Rehan

ELE335 (Artificial Intelligence)

Problem Description

Diagnosing diseases based on symptoms can be difficult due to limited access to doctors and the complexity of symptom interpretation, leading to delays in seeking medical help.

System Functionality

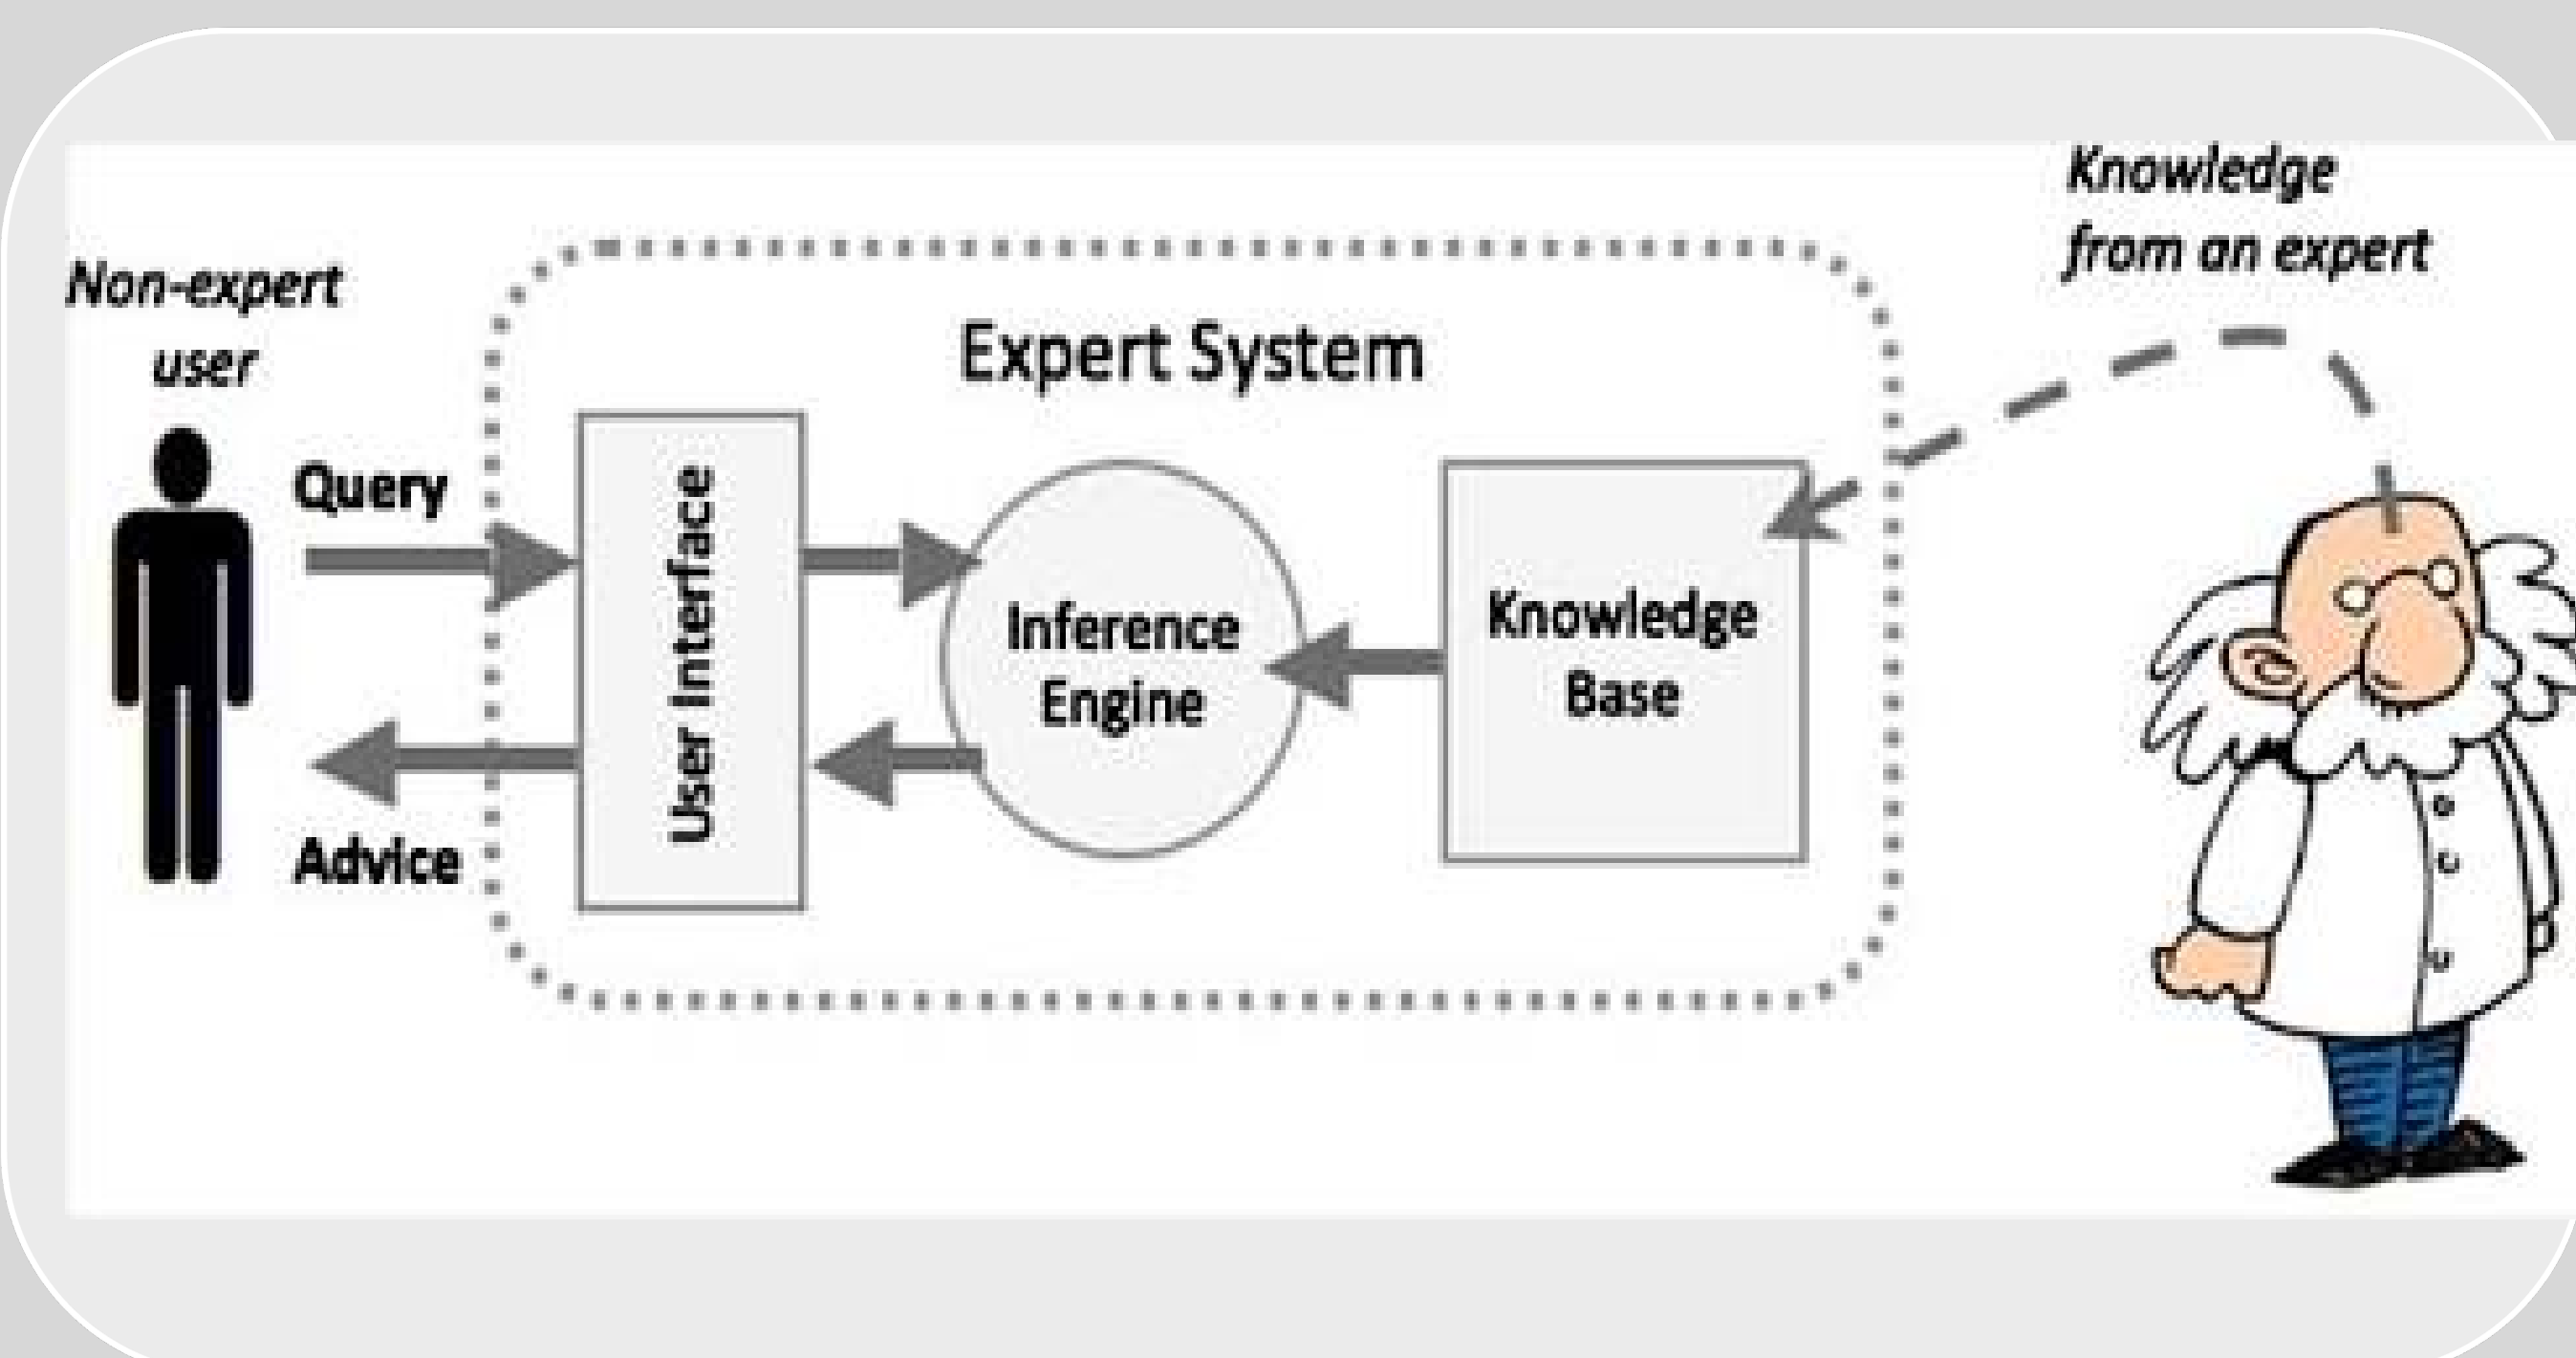

The Integrated Medical Diagnosis System allows users to input their symptoms and receive an analysis of potential diseases based on their responses. The system evaluates the input using a diagnosis algorithm, calculates the likelihood of various diseases, and provides treatment suggestions accordingly. It supports both Arabic and English languages for broader accessibility, ensuring that users from different linguistic backgrounds can benefit from the tool

Aims & Objectives

- Provide quick disease identification based on symptoms.
- Support both Arabic and English for wider accessibility.
- Offer treatment suggestions to assist decision-making.

System Design

Implementation

aya, based on the symptoms you entered, possible conditions are:

- common_cold: 25.0%
(Low confidence. Do not treat without professional advice)
- sinusitis: 50.0%
Suggested treatment:~n * Steroid nasal sprays
* Oral decongestants
* Saline nasal wash
- pneumonia: 60.0%
Suggested treatment:~n * Amoxicillin-clavulanate (625mg every 8 hours)
* Complete rest
* Oxygen if saturation < 92%
- flu: 66.7%
Suggested treatment:~n * Rest at home
* Warm fluids
* Paracetamol (500â€”1000mg every 6 hours)
* Oseltamivir for severe cases
